Case 1: |V(G)| > 13Proof of Proposition 2 Case 2: |V(G)| < 11

### Case 2 of Proposition 1

Suppose G is MMN2A with |V(G)| < 11. We'll argue G is in Heawood family.

Case 1: |V(G)| > 13Proof of Proposition 2 Case 2: |V(G)| < 11

## Case 2 of Proposition 1

Suppose G is MMN2A with |V(G)| < 11. We'll argue G is in Heawood family.

Earlier work showed this in case |V(G)| < 10.

Case 1: |V(G)| > 13Proof of Proposition 2 Case 2: |V(G)| < 11

# Case 2 of Proposition 1

Suppose G is MMN2A with |V(G)| < 11. We'll argue G is in Heawood family.

Earlier work showed this in case |V(G)| < 10.

Assume |V(G)| = 10.

By Proposition 2, G has minimal degree at least four.

Case 1: |V(G)| > 13Proof of Proposition 2 Case 2: |V(G)| < 11

# Case 2 of Proposition 1

Suppose G is MMN2A with |V(G)| < 11. We'll argue G is in Heawood family.

Earlier work showed this in case |V(G)| < 10.

Assume |V(G)| = 10.

By Proposition 2, G has minimal degree at least four.

This leaves only a few possible graphs to consider.

### An answer

#### [HNTY] characterise the Heawood family as MMI(K or C3L).

・ロン ・回と ・ヨン ・ヨン

### An answer

[HNTY] characterise the Heawood family as MMI(K or C3L).

They also show that  $I(K \text{ or } C3L) \Longrightarrow N2A$ .

・ロト ・回ト ・ヨト ・ヨト

### An answer

[HNTY] characterise the Heawood family as MMI(K or C3L).

They also show that  $I(K \text{ or } C3L) \Longrightarrow N2A$ .

Affirmative answer to Q1 implies that Heawood family are precisely the set of MMI(K or C3L) graphs on 21 edges.
